
Zero-containing analogs [total]: complete-block sensitivity comparison (page 2)
Each minimum = 0; direct SE bands. Block selection can bias the PMF.
SCK (0/9 complete blocks)
SCL (3/9 complete blocks)
SCL-1 (1/9 complete blocks)
SCM (5/9 complete blocks)
SCM-1 (1/9 complete blocks)
SCN (0/9 complete blocks)
SCQ (1/9 complete blocks)
SCR (0/9 complete blocks)
PMF - minimum (kJ/mol)
|z| (Å)
No complete block: alternative unavailable
One complete block: SE unavailable
All blocks: ln(p + ε)
All blocks: Bayesian
All blocks: Poisson-Gamma
All blocks: latent
Complete blocks: no pseudocount
