Zero-containing analogs [total]: complete-block sensitivity comparison (page 4)
Each minimum = 0; direct SE bands. Block selection can bias the PMF.
SCV (7/9 complete blocks)
SCV-1 (7/9 complete blocks)
SCW-1 (5/9 complete blocks)
SCY-1 (3/9 complete blocks)
SCYM (0/9 complete blocks)
PMF - minimum (kJ/mol)
|z| (Å)
No complete block:
alternative unavailable
All blocks: ln(p + ε)
All blocks: Bayesian
All blocks: Poisson-Gamma
All blocks: latent
Complete blocks: no pseudocount
